This one is that what I would like to do b0ot then we don't know, what you would like to do Is the keygen 64bits the only version which is compatible with autocad? I heard of an other one called win32 I think it is a commandline version but it works in a terminal MonkeyDust, what would be the advantage of using the keygen over a open source version? b0ot: Probably to set system-wide encryption, if that is what your goal is ok thanks The command line version isn't free? No. Ooooo b0ot that's what's called a commercial solution, and works well Oooo I see Is this a commercial one, or a free one? hello its cool this is my first time here You can always ask a question cool hi i need help then ask your question i have a problem Like, be more specific how to i set default browser in ubuntu Some people have issues with setting default browser, that is a lot of people so you are probably better off asking that on a website like ask ubuntu.com b0ot start here okay but its not a google question, anyways b0ot, some people have issues with setting default browser, that is a lot of people so you are probably better off asking that on a website like ask ubuntu.com I don't know how 82157476af
